

Global Spatial Data Infrastructure Latin America and the Caribbean Newsletter

SDI-LAC

July 2009

Vol. 6, No. 7

Spatial Data Infrastructure-Latin America and the Caribbean (SDI-LAC) is a regional, monthly, and free, electronic newsletter from the [Global Spatial Data Infrastructure Association](#) (GSDI). It focuses on aspects related with Spatial Data Infrastructure, and on GIS, remote sensing, and data management issues, related with SDI in Latin America and the Caribbean. It aims to raise awareness, provide useful information to strengthen national SDI initiatives, and support synchronization of regional efforts.

[GSDI Definition](#)

The [Pan-American Institute of Geography and History](#) (PAIGH), member organization of GSDI, and the [Permanent Committee on Geospatial Data Infrastructure for the Americas](#) (PC-IDEA), promote SDI development in the region. The newsletter is prepared by PAIGH for GSDI.

[Message from the Editor](#)

[Input to this Issue](#)

[SDI News, Links, Papers, Presentations](#)

[Articles and Books of the Month](#)

[Geospatial Research and Applications](#)

[GIS Tools, Software, Data](#)

[Training Opportunities](#)

[Funding Opportunities, Awards, Support](#)

[Employment Opportunities](#)

[Other](#)

[Americas: Conferences, SDI Events](#)

Message from the Editor

Now, SDI-LAC Newsletter is available in Portuguese! Portuguese Translation of SDI-LAC is possible thanks to Eduardo Freitas-Oliveira, a cartographic engineer, MSc in GIS, editor of MundoGEO Web Portal and InfoGEO Magazine.

Due to an increasing volume of information on events, the respective section will be restricted to those events taking place in the Americas. However, for "The Rest of the World: Conferences, SDI Events", please find a link to upcoming events of global or major international interest in GSDI webpage at: <http://www.gsdi.org/events/upcnf.asp>

We kindly inform that SDI-LAC Newsletter is taking correspondent members in each country of the LAC region. Next issues will include their contributions. If you would like to become a correspondent for your country please contact Nancy Aguirre cnaquirre@ipgh.org. In principle the only requirement is that you are an active member in the Spatial Data Infrastructure activities of your country.

If you have news or information related to GIS, remote sensing, and Spatial Data Infrastructure that you would like to highlight (e.g., projects, conferences, workshop announcements, publications, reports, websites of interest, etc.), kindly send them in. We would be happy to include them in the newsletter. We also encourage you to send to the editor your comments and suggestions for the continuous improvement of SDI-LAC Newsletter. **PLEASE share this newsletter with colleagues who may find the information useful, and ideally they will subscribe themselves.**

Back issues of the newsletter are at the GSDI website: <http://www.gsdi.org/newsletters.asp>

Editor, Nancy Aguirre, Pan-American Institute of Geography and History (PAIGH), <http://www.ipgh.org>, cnaquirre@ipgh.org

SDI News, Links, Papers, Presentations

Joint GSDI-11 / INSPIRE / Geonovum RGI Word Conference a Success!

The joint GSDI-11 / INSPIRE / Geonovum RGI World Conference held in Rotterdam, the Netherlands, on June 15-20, 2009 was a great success; and the newly established GSDI's Outreach and Membership Committee, Chaired by Mark Reichardt of the Open Geospatial Consortium (OGC) and Co-Chaired by John Moeller, will soon make available the post-Conference Report. In the

meantime, the geospatial community is already looking forward to participating in the GSDI-12 World Conference that will take place on October 18-22, 2010 in Singapore.

A book containing various peer reviewed articles was distributed to all who registered to the joint World Conference. "This book is a collaborative initiative of the Global Spatial Data Infrastructure Association (GSDI), the European Commission's Joint Research Centre, the European Umbrella Organization for

SDI-LAC Newsletter

A promotional poster for the GSDI 12 World Conference in Singapore 2010. The poster has a blue and white color scheme. At the top, it reads 'GSDI 12 WORLD CONFERENCE | SINGAPORE 2010'. Below this, it says 'Realising Spatially Enabled Societies'. There are three small images showing people and cityscapes. The main text on the poster includes: 'Be part of our history. This is the first time that the GSDI World Conference is held in Singapore.', 'In the heart of Asia, the Garden City of Singapore welcomes you in October 2010 for the GSDI 12 World Conference, to be held in conjunction with the 16th PCGIAP Annual Meeting. Engage yourself in intellectual exchange with leaders and experts in the geospatial industry. Network with your counterparts to expand your business. Immerse yourself in the harmonious blend of culture, cuisine, arts and architecture that is Uniquely Singapore. A memorable experience awaits you.', 'Visit www.gsdI.org or www.sla.gov.sg for more information.', and a quote: '"GSDI 12 World Conference will be the premium geospatial conference in 2010. Singapore is proud to be co-organising this event with GSDI Association."'. At the bottom, it lists the joint organizers (GSDI, SLA, and UN-SPIDER) and the host, the Singapore Land Authority, with a photo of the Esplanade - Theatres on the Bay.

Vol. 6, No.7

Global Spatial Data Infrastructure Latin America and the Caribbean Newsletter

Geographic Information (EUROGI), the Dutch Innovation Programme Space for Geo-Information (RGI) and Geonovum, the Netherlands SDI Executive Committee. In addition to the traditional call for papers for the joint GSDI-11 / INSPIRE / Geonovum RGI conference “Spatial Data Infrastructure Convergence: Building SDI Bridges to Address Global Challenges” contributions of full articles were solicited for publication in this peer reviewed volume. In several instances, the articles submitted addressed the theme of the conference. In others they stuck to the more traditional fields of SDI. The reviewing process resulted in twenty articles that together can be summarized as Spatial Data Infrastructure Convergence: Research, Emerging Trends, and Critical Assessment. These topics are represented well in this volume” (p.vii).

GSDI-11 Parallel Session 2.10: Regional Newsletters Open Meeting

GSDI Regional Newsletters Open Meeting during GSD11 World Conference was moderated by Al Stevens, Santiago Borrero, Abbas Rajabifard, and Hussein Farah. It allowed, discussing face to face suggestions for coordinating efforts towards improving or expanding the newsletters and related services, between editors and collaborators to the GSDI Regional Newsletters. Short term tasks were agreed which would be reflected in the future newsletters’ form and contents. We want to increase direct contributions of the geospatial community to the newsletters and to broaden the group of correspondent members of different countries in these regions. We welcome your suggestions and comments to continuously improving our newsletters. Please send your comments directly to the regional newsletter’s editors (Editor SDI-LAC Newsletter: Nancy Aguirre cnaguirre@ipgh.org).

GSDI-11 Parallel Session 6.1 on National Experiences of Latin America

GSDI-11’s Parallel Session on National Experiences of Latin America and the Caribbean was a success! It was moderated by Santiago Borrero, Secretary General of the Pan American Institute of Geography and History (PAIGH). The session included four presentations from nationals of Chile, Cuba, Mexico and Trinidad Tobago. The moderator asked presenters to share their main challenges and achievements on advancing SDI initiatives in their countries. Perceptions on main challenges included: the need for increasing governmental awareness on developing SDIs; conducting bottom-up SDI approaches; and the partial understanding on constructing SDIs in small (island) countries. Responses to main achievements included: increasing capacity building; the establishment of alliances; and accomplishing of legal frameworks at highest national levels. Recommendations on issues that could help increasing political support to SDIs included: developing sound SDIs models for main stakeholders, and taking advantage of any opportunity that could lead to raising awareness in those grounds. This session helped sharing ideas, best practices and concerns about current SDIs developments in the LAC region [Papers on these presentations may be found at http://www.gsdi.org/gsd11/prog_details.html].

[GSDI Photo Report](#)

Source: <http://www.gim-international.com/>

Last week Rotterdam (Netherlands) provided the venue for the 11th GSDI Conference, themed "Building SDI Bridges to Address Global Challenges". About 1,200 delegates heard keynote speakers, attended workshops and informal meetings, and contributed to the sharing of knowledge about geospatial data infrastructures and their uses. A lively trade show offered opportunities to learn about various service providers. [Go to the Photo Album](#)

[SDI Cookbooks](#)

The latest Global Spatial Data Infrastructure Conference (GSDI-11) ended in June in Rotterdam. This event could be a good marker for time elapsed in the building of a Spatial Data Infrastructure(s). Has there been sufficient progress? Can people in various parts of the world say that there's an infrastructure serving them or some of their needs as yet? Here are a couple of resources for those still trying to get an SDI up and running:

[19th General Assembly and Consultative Technical Meetings of PAIGH](#)

Source: <http://www.ipgh.org/>

The 19th General Assembly and Consultative Technical Meetings of the Pan American Institute of Geography and History (PAIGH) will be held in Quito, Ecuador, on October 26-30, 2009. Detailed information, including the schedule of events is available at <http://www.ipgh.org/19-Asamblea-General/default.htm>

4th ICG Session Concludes in Martinique

Source: NEMO News, Santa Lucia

Significant progress has been made towards the establishment of a Caribbean Tsunami and other Coastal Hazards Early Warning Centre (CTWC) and that of a Caribbean Tsunami Information Centre (CTIC). This was announced on June 5, at the conclusion of the 4th Session of the Intergovernmental Coordination Group for the Tsunami and other Coastal Hazards Warning System for the Caribbean and Adjacent Regions (ICG/CARIBE EWS-IV) in Fort de France, Martinique (Caribbean region). Chairman of the ICG, Dr. Lorna Inniss of Barbados, reiterated the body's commitment to the establishment of the CTWC by 2010 and acknowledged a phased approach offer by the USA to determining the feasibility of hosting the Centre in Puerto Rico. Regarding the establishment of CTIC, she stated that Barbados had led the ICG member states in endorsing the establishment of the Centre and reiterated its commitment to entering into negotiations with the IOC on the initial tasks towards its successful launch in the region. She further revealed that funds

Global Spatial Data Infrastructure Latin America and the Caribbean Newsletter

have already been identified under the United Nations Development Programme and within the IOC budget for the start up of the Centre. It urged states to work to standardize national protocols and operating procedures to reduce response time and to inform the development of response protocols based on the results of the Caribbean Disaster Emergency Response Agency (CDERA) Tsunami and Coastal Hazards Warning System Project.

[New website of the Spatial Data Infrastructure Coordinating Committee of Peru](#)

Source: Max Lazaro

The new website of the Spatial Data Infrastructure Coordinating Committee of Peru (in Spanish CCIDEP) is available at: <http://www.ccidep.gob.pe>. CCIDEP is currently advancing processes for the generation of geographic information catalogs, and will soon issue their directives. The site includes information about CCIDEP Data and Services, Standards and Metadata, Training, links to other Websites and Events, among others. Section on Liaison Portals to projects is relevant and includes 1) the [IDEP Portal Version 0.0](#) which will display data and services developed by the various participating institutions, following an inter-institutional pilot project; and 2) the [Spatial Information Integrator System on MapServer version 0.1](#), which integrates various WMS spatial information layers.

[New fibre optic cable will put Guyana on brink of ICT breakthrough](#)

Source: <http://www.stabroeknews.com/>

As the Guyana Telephone and Telegraph Company (GT&T) continues to work towards its deadline of the second quarter of 2010 for the operationalizing of a new multi-million dollar fibre optic cable to service the country's telecommunications sector, the company's Chief, Joe Singh, has told that the completion of the project will place the country's Information and Communications Technology (ICT) sector on the threshold of a significant breakthrough. Singh said that the local telecommunications company's US\$30m investment in the new cable system will, among other things, create the long-awaited additional and cheaper bandwidth that is critical to the expansion of the country's ICT sector. "The cable will help realize everything that the President has been saying about a national ICT strategy, including the creation of an Information Technology village, marketing Guyana as a destination for the establishment of Call Centres; retooling the system of administration using e-governance; dealing with and addressing issues like Distance Learning. All of these things will be facilitated because of the reliability, capacity, redundancy and affordability arising from the installation of the cable," Singh said. While the benefits of the new fibre optic cable could still be a year away, GT&T has already initiated a programme to sensitize both the public and private sectors to its potential to enable the enhanced application of IT to the various facets of national life.

[Barbados embraces ICT](#)

Source: <http://www.itweb.co.za/>

A cabinet subcommittee has been established to develop a comprehensive Information Communication Technology (ICT) plan for Barbados. The Barbados Advocate Minister of Health, Donville Inniss, says the committee represents the major economic sector inclusive of health and education and was created because government recognized the need for a national approach to integrating ICT in its developmental programmes and strategies. The Ministry has made significant headway in formulating an ICT policy through the work of an information management and information technology task force.

[New name of the IGM, Argentina](#)

Source: <http://www.prosiga.gob.ar/>

Bienvenido al Instituto Geográfico Nacional
República Argentina

Ministerio de Defensa | Secretaría de Planeamiento

Upon Decree 554/2009 of the President of the Republic of Argentina, published in the Official Gazette 31665, the name of the Military Geographic Institute (IGM) has changed for National Geographic Institute (IGN) as of May 18 this year. The Decree also appointed Liliana Weisert as the new Director General of IGN.

[Now ready regulatory policies that govern technology and telecommunications, Colombia](#)

Source: <http://www.eltiempo.com/>

Colombia finally adopted the so-called Law of Information and Communications Technologies (ICT) which establishes a new regulatory framework for telecommunications. This initiative, is the result of ten years of analysis inside the Ministry of Communications and Industry, and becomes the Government's reference for public policy development on ICTs.

[Regional Government of Atacama officially launches first national Geonode, Chile](#)

Source: <http://www.snit.cl/>

On June, in the city of Copiapo, of the Atacama Region, was officially launched the "Geonodo" already available to all users as a platform for publishing online territorial information to state institutions and the general public. Geonodo is a tool developed by the Executive Secretariat of the National Territorial Information System of Chile (SNIT), whose main objective is to enable institutions publishing spatial information which can be loaded and deployed locally, providing further information published on the SNIT's Geoportal central node. This is a first step to building a web based national network of digital cartography, information exchange and publication. In the short term, other state institutions will join this important initiative for the production and publication of spatial information through the Web. The Atacama Geonodo may be found at:

www.goreatacama.cl

Global Spatial Data Infrastructure Latin America and the Caribbean Newsletter

[SNIT visited Chilean Magellan and Antarctic Regions](#)

Source: <http://www.snit.cl/>

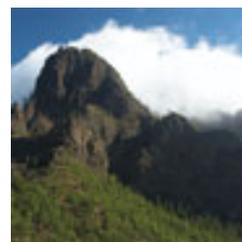

On May 2009, a SNIT delegation traveled to the Magellan region as part of its coordination system work plan. A technical regional meeting took place with participation of more than thirty representatives of the City and Regional Services in Punta Arenas, who presented progresses of the SNIT's work plan. The implementing of the Geoportal and other products developed by the entity that coordinates the national land information were shown. Pertinent activities ended with a training and dissemination workshop on the National Catalog, where participants created and published metadata files. Attendees were also trained on information management, and mapping publishing tools within the "Geonodo".

[SDI for the Island of La Palma, Spain](#)

(Article by J.A. Bermejo Dominguez and A. Anguix, of Cabildo Insular de La Palma)

Source: GeoConnexion, *Geo: International Magazine* (<http://www.geoconnexion.com/>)

The Spatial Data Infrastructure of the island of La Palma involves collaboration, training and information dissemination. One of the basic building blocks for Spatial Data Infrastructure (SDI) is establishing cooperation between the various producers, integrators and users of data. In the case of the SDI of La Palma, the Cabildo Insular de La Palma, as the governing body of the SDI, is well aware of this challenge and is mitigating it by establishing a framework of mutual cooperation agreements with the various public administration entities in the island, and agreements that promote a variety of actions [The complete article may be found at http://www.geoconnexion.com/uploads/sdilapalma_intv8i6.pdf].

[Australian Geospatial Economic Impact Report Update](#)

Source: <http://www.directionsmag.com/>

In November 2007, ACIL Tasman, an economic consultancy in Australia, released a ground-breaking study on the impact of geospatial technology on the Australian Gross Domestic Product (GDP). That report stated, "The impact on GDP in 2006-07 of the spatial information industry is estimated to range between \$6.43 billion and \$12.57 billion for the quantifiable lower bound and estimated realistic scenario respectively." Alan Smart, lead author of the report, said: "We have not rerun the economic assessment for Australia. However, a new set of data from the Australian Bureau of Statistics revealed that the revenue from the industry had increased from around \$926 million in 1998-1999 to \$2,223 million in 2005-2006".

the Earth in order to monitor, measure, and forecast natural and human activity on the planet. More information at: <http://www.isde6.org/>

Call for Papers - First Call: Terra Cognita 2009 Workshop

Source: UCGIS list

This is a 5 hour workshop on Monday, October 26, 2009. Submissions: **24 July**. The goal of this workshop is to bring together researchers in an increasingly growing field of Semantic Web research - geospatial semantics and applications. Enabling synergy between Semantic Web and geospatial researchers encourages spatially-related semantic research on formal methods and better knowledge representations as well as the use of geospatial semantics in applications. First call for papers for Terra Cognita 2009 Workshop <http://asio.bbn.com/terracognita2009/>. In Conjunction with the 8th International Semantic Web Conference, (ISWC 2009), <http://iswc2009.semanticweb.org/>, near Washington, D.C., U.S.A.

2nd World Copyright Summit

Source: <http://www.copyrightsummit.com/>

Some 500 delegates from more than 55 countries attended the 2nd World Copyright Summit held on June 9-19 in Washington D.C. The future of copyright is a hotly reported and debated issue as the digital era poses many challenges that affect all creators and creative industries. The 2nd World Copyright Summit was a 2 day event where the shape and impact of the new creative, economic, technological and legal environment were discussed.

What is the Role of Education in Building a Digital City?

Source: <http://www.vector1media.com/>

"Education plays a key role in the development of a digital city. New technologies, new approaches, changing social patterns and improved infrastructure are important aspects of a digital culture. The journey is already under way and we can see parts of it in terms of geospatial products and services as well as communication technologies. But for the highest levels of digital cities to take shape will also require suitable policies, funding and commitment." The complete article may be found at: <http://www.vector1media.com/dialogue/perspectives/what-is-the-role-of-education-in-building-a-digital-city?/> [Written by Jeff Thurston, editor Europe, Middle East & Africa].

Articles and Books of the Month

Changing Notions of a Spatial Data Infrastructure

By Ian Masser (Article and refereed book chapter presented to the Joint GSDI-11/ INSPIRE/ Geonovum RGI Word Conference, held on June 15-20, in Rotterdam, The Netherlands)

[Abstract by the author](#)

This article examines some of the changes that have taken place in the notion of a Spatial Data Infrastructure (SDI) over the last 15 years. The discussion is divided into five parts. The first of these considers the impacts of innovations in communications and information technology during this period on the nature of SDIs. The second examines the changes that have taken place in the conceptualization of SDIs while the third discusses the changing nature of SDI implementation in the context of the concepts of multi level governance that have been developed by political scientists. Underlying this discussion is the realization that SDI development and implementation is very much a social process of learning by doing. This process is explored in the fourth section of the article with reference to the experience of the State of Victoria in Australia. The concluding section of the article considers the challenges facing SDI implementation and identifies a number of dilemmas that have yet to be resolved [The complete article may be found at: <http://www.gsdi.org/gsdi11/papers/pdf/375.pdf>].

[Small Islands Spatial Data Infrastructure](#)

By Alan Mills (Published by GeoConnexion, *Geo: International Magazine*, June 2009 <http://www.geoconnexion.com/>)

[Excerpts from original article](#)

GIS for Spatial Data Infrastructure (SDI) is used throughout the world to instill cooperation and collaboration in spatial data to better address social, economic and environmental issues. It seems logical that large countries like the United States have invested in SDI, such as the GeoSpatial One-Stop and unions come together to share data and resources via the Infrastructure for Spatial Information in Europe (INSPIRE). Does SDI make sense for smaller countries and communities? Arguably, even smaller nations benefit from land ownership being carefully mapped, public works and utilities documented, environments and biodiversity protected, and resources assess and strategic planning completed. Thanks to special funding through the joint United Kingdom Foreign Office/Department for International Development (DFID) Environment Programme, a group of UK Overseas Territories and the Organization of Eastern Caribbean States are able to rely on GIS for SDI; using the solution for data quality and control, information sharing and delivering finished products for use between governmental agencies and private organizations. Calling themselves "tiny SDI", these small islands use ArcGIS as the backbone for spatial data sharing [The complete article may be found at: http://www.geoconnexion.com/uploads/smallislands_intv8i6.pdf].

Global Spatial Data Infrastructure Latin America and the Caribbean Newsletter

Building Data Infrastructures at the Local Level

By Tatiana Delgado Fernández and Rafael Cruz Iglesias (Delgado, T. and Cruz, R. 2009. *Construyendo Infraestructuras de Datos a Nivel Local*. Havana, Cujae)

Excerpts from the introduction by the authors (translation)

During year 2008 the project "Spatial Data Infrastructure to support the local level" has progressed. It is a project sponsored by the United Nations Development Program, aimed to develop a Spatial Data Infrastructure (SDI) at the local level, as a pilot stage for "deployment" of territorial SDIs in Cuba, upon Agreement No. 5535 of the Executive Committee of the Council of Ministers that created the National Spatial Data Infrastructure of the Republic of Cuba (in Spanish CIDERC) and guides its deployment at local levels: provinces and municipalities. The book is divided into five chapters. The first, relates to a definition based on five perspectives that explain an SDI approached as a business, the information contained, services involved, distribution of these services, and technologies to be used. In the second approach, the definition focuses more on the distinction regarding infrastructure systems and networks, with a strong emphasis on the coordination aspects. A third chapter is devoted to laying bare the current state of the Spatial Data Infrastructure of the Republic of Cuba from its legal framework, and a set of core projects that are now being faced. Fourth chapter seeks to cover methods of building a SDI at the local level (provincial), which can be used as a guide to current aspects faced by the provincial commissions of SDIs in Cuba; describing some challenges IDERC must confront to enhance the deployment of local SDIs from a "top down" perspective; as well as some characteristics of "bottom up" approaches, where the crucial role is of local players and in particular the users of geographic information. Finally, some conclusions are offered as a summary of the most important aspects covered in the book highlighting key messages for the reader.

Geospatial Research and Applications

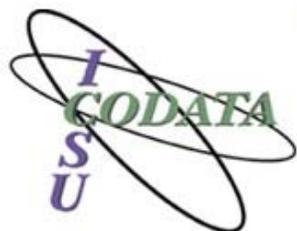

Global Roads Open Access Data Set ([gROADS](#)) Solicits Improved Roads Data

Source: Alex de Sherbinin

The current lack of high quality public domain roads data in Latin America has seriously hampered disaster response by humanitarian agencies and resulted in many inefficiencies as organizations have had to obtain proprietary data or build their own roads data to suit specific applications (e.g. for development research, regional planning, etc.). The Global Roads Open Access Data Set (gROADS) is an initiative of the International Council of Science's [CODATA](#) Global Roads Working Group that seeks to fill this gap. gROADS has been endorsed by the Global Spatial Data Infrastructure Association ([GSDI](#)), GISCorps of the Urban and Regional Information Systems Association (URISA), and the United Nations Global Alliance on Information and Communication Technology for Development ([UN-GAID](#)). The goal is to create a global roads data set that is: (a) globally consistent (using the [UNSDI-Transport](#) data model); (b)

Global Spatial Data Infrastructure Latin America and the Caribbean Newsletter

spatially accurate (~50m positional accuracy); (c) topologically integrated; (d) up-to-date; (e) well documented; and (f) freely distributed but with acknowledgement to those who have contributed to its creation.

Sunday, June 28, 2009

International Council for Science : Committee on Data for Science and Technology

< home > < newsletter > < discussion list > < data science journal > < contact > < members area >

C O D A T A

Working Group: Global Roads Data Development

As a first step in creating this data set, gROADS is soliciting spatially accurate data with at least minimal attribute information (e.g., specification of road type or quality) for inclusion in gROADS. gROADS is creating the infrastructure necessary to update these data in a distributed manner, so that those who contribute data can expect, within a three to four year time frame, to see improvements to their original dataset through the inputs of a wider community. These data will then be available to their organization/agencies as well as others who may have need of updated data. Semi-automated means for facilitating distributed contribution of GPS tracks and digitizing tracks off of imagery are both being pursued as well as efficient means for gathering information about road characteristics. Any enhancements will be clearly documented in terms of the source of the updates. Thus, contributors obtain continuing visible credit for any contributions because each data source will be documented in the accompanying data documentation. Furthermore, organizations will be listed as a supporting data contributors on the [gROADS](#) Web site. You may highlight on your own website that your organization is a recognized official contributor of gROADS, and your organization will be granted authority to use the trademarked gROADS contributor logo in conjunction with this statement.

For more information, or to contribute data, please contact Alex de Sherbinin at CIESIN, Columbia University, at adesherbinin@ciesin.columbia.edu and tel. +1-845-365-8936, or visit <http://www.groads.org>.

CATHALAC launches first comprehensive Tropical Carbon Stock Monitoring System

Source: CATHALAC List

The Water Center for the Humid Tropics of Latin America and the Caribbean (CATHALAC, Spanish acronym) proudly announces the launch of the Tropical Carbon Stock Monitoring System (TROPICARMS 2.0). TROPICARMS 2.0 is a simple, easy to use monitoring tool which provides end users with the latest information on land carbon stocks within the world's tropical ecosystems. It includes three interlinked dynamic modules covering monitoring, modeling and reporting of carbon stocks. The development of this system represents an important step towards addressing the carbon monitoring needs of resource managers, investors, policy makers alike. TROPICARMS 2.0 takes a multi-scale approach, providing a modular framework for measuring and periodically reporting on carbon storage at the local, national or regional scales. The System also addresses the carbon stored both above and below ground, and across varying climatic zones, altitudes, terrains, and soils. It can also provide carbon stock projections based on policy and climate change scenarios. For more information visit www.cathalac.org or contact: Jennifer Croston, Development and International Cooperation Officer, e-mail jennifer.croston@cathalac.org.

Phone + 507-3173200 ext. 245, fax +507-3173299, or contact us at tropicarms@cathalac.org.

[MESA: Improving predictability of the South American monsoon systems](#)

Source: Kate Lance

The annual cycle of precipitation over tropical South America features distinct wet and dry seasons between the equator and 25°S. Many areas within that region receive more than half of their annual rain during the austral summer, the “monsoon season”. The Monsoon Experiment in South America (MESA), a component of the WCRP-CLIVAR/GEWEX programme on monsoon research, will focus on understanding the main characteristics and variability of the South American monsoon systems to improve its predictability on timescales spanning from diurnal to interannual and longer. See MESA Science and Implementation Plan http://www.clivar.org/organization/vamos/Publications/MESA_ImplementationPlan_April_2009.doc

[State of Play of the Operational and Legally Bound Spatial Planning SDI in The Netherlands](#)

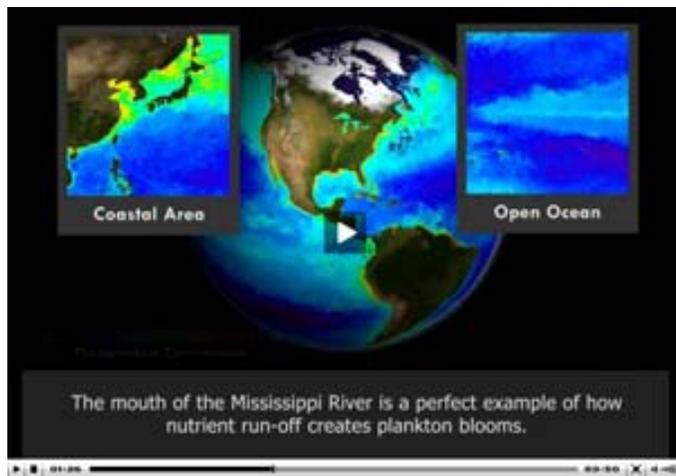

Arie Duindam, Ron Bloksma, Hennie Genee, Jeroen van der Veen (Article and refereed book chapter presented to the Joint GSDI-11/ INSPIRE/ Geonovum RGI World Conference)

Abstract

In the period 2000 to 2006, much work was carried out to prepare an SDI for spatial planning information in the Netherlands. From 2006 onwards, the implementation of this infrastructure has taken place by means of a dedicated E-Government programme. The Spatial Planning SDI (SP-SDI) is now being implemented at three governmental levels and will be fully operational by the end of 2009. This paper gives an in-depth overview of crucial aspects of this thematic SDI. The operational characteristics of the SP-SDI at three separate governmental levels are described. Moreover, the development of new national legislation as a supporting fundament of the SDI is discussed. The new Spatial Planning Act forces national, provincial and local governments to publish digital geographic datasets as authentic sources of information. Another main topic is the standardization processes that have taken place in the field of spatial planning in the Netherlands over the last nine years. A crucial force underpinning the success of this process was the involvement of a broad range of stakeholders over a sustained period. As a result, the spatial planning standards have come to the maturity level required to implement an operational SDI. The last major area is the development of Spatial Planning Online, a national spatial planning facility. A web portal and a set of web services have been implemented to provide aggregated and cartographic information as well as an interface to the national SDI of the Netherlands and Inspire. Furthermore, a national validation service based on the spatial planning standards has been developed to assure operational interoperability. This paper gives an overview of all necessary collaborations to make the infrastructure work. For each topic above, crucial success factors as well as the most important lessons learned are discussed, with a focus on operational requirements. The knowledge accumulated over the last decade could be of great benefit for other SDI initiatives, and national and regional SDIs may derive important drivers for their own realization from this experience.

[NOAA Forecast Predicts Large "Dead Zone" for Gulf of Mexico this Summer](#)

Source: <http://www.noanews.noaa.gov/>

A team of National Oceanic and Atmospheric Administration NOAA-supported scientists from the Louisiana Universities Marine Consortium, Louisiana State University, and the University of Michigan is forecasting that the "dead zone" off the coast of Louisiana and Texas in the Gulf of Mexico this summer could be one of the largest on record. The dead zone is an area in the Gulf of Mexico where seasonal oxygen levels drop too low to support most life in bottom and near-bottom waters. Scientists are predicting the area could measure between 7,450 and 8,456 square miles, or an area roughly the size of New Jersey. However, additional flooding of the Mississippi River since May result in a larger dead zone. The largest one on record occurred in 2002, measuring 8,484 square miles. The information is available on the [NOAA's Gulf of Mexico](#)

[Hypoxia Watch Web page](#). The objective of Hypoxia Watch is to develop new near-real-time data and map products using shipboard measurements of bottom-dissolved oxygen and to disseminate them over the Internet. These products form the basis for summertime advisories to fishermen in the North-central Gulf of Mexico, indicating where fish and other living marine resources may not be found due to low or non-existent oxygen levels. An animation is available at: <http://www.nvvl.noaa.gov/MediaDetail.php?MediaID=84&MediaTypeID=2>

[Tools for Coastal Marine Ecosystem-Based Management and Geographically Referred Data Integration – The Santos Region Case Study](#)

Silvia Maria Sartor, Anne Sartor Palm, Lia Palm, Eduardo Jun Shinohara, Jose Alberto Quintanilha (Article presented to the Joint GSDI-11/ INSPIRE/ Geonovum RGI Word Conference)

Abstract

This paper proposes an SDI data integration model with the focus on facilitating the knowledge and management of coastal regions. It is focused on the Santos Basin Region (Brazil), integrating information from a variety of sources, including all that is available about vegetation, geomorphology, biodiversity, transportation links, hydrodynamic patterns, hydrography, housing, pollution, and social resources. A multidisciplinary team developed a data bank gathering previously existing information. That information covers nine municipalities and 246 km of coastline. Linked to geography this product acts as a shared information bank that can be accessed and managed, improving the examination and monitoring of the areas. Furthermore, studies are being integrated in a SDI tool, to make sure the data bank will be systematically updated. This study shortens the time to analyze and understand the ecosystem, and helps to define new areas to be protected. A case study about layers integration as a tool to improve management policy in Ecological-Economic Zones (EEZ) is presented.

[USGS: Good Resource During Hurricane Season](#)

Source: <http://spatialnews.geocomm.com/>

Natural Hazards

When hurricanes strike, you can find critical information to help protect lives and property at the U.S. Geological Survey (USGS) hurricane Web site (<http://www.usgs.gov/hazards/hurricanes/>). The USGS hurricane Web site highlights important storm information, such as flood levels; pictures of the coastline before and after the storm; information on

Global Spatial Data Infrastructure Latin America and the Caribbean Newsletter

the timing, extent and magnitude of storm tide; and much more. USGS research and analysis supports the National Oceanic and Atmospheric Administration (NOAA), which is responsible for monitoring and issuing warnings for hurricanes and tropical storms in the United States and its territories. Science to forecast hurricane impacts is a collaborative effort among various organizations.

[New Programs Put Crime Stats on the Map](#)

Source: <http://online.wsj.com/>

Many crime sites, including CrimeReports.com and CrimeMapping.com, began sprouting up in 2007, with the launch of Google Maps. The Web sites are free for consumers. An Internet-enabled mapping service that provides satellite images for most urban areas, Google Maps gave crime mapping a cost-effective foundation. The crime-mapping services were then able to focus exclusively on software that recognized addresses and build systems capable of pulling data from police records. The Web services remain small -CrimeReports.com says it has 70,000 users and CrimeMapping.com says it has 3,000 users- but consumers who use them say the services have made them feel safer.

[Recent Information Layers added to IGM's Geoportal, Ecuador](#)

Source: <http://www.geoportaligm.gov.ec/>

On June 2009, the Military Geographic Institute of Ecuador (IGM) has included in its web portal more than 18 gravimetric circuits of the Fundamental Gravimetric Network of the country, various Vertical Control lines, and a Map on the Ecuadorian Infrastructure at scale of 1:250.000. For detailed information on each of these layers please log on to: <http://www.geoportaligm.gov.ec/>

CatMDServices now available

Source: GeoSpatiumLab and the Advanced Information Systems Group from the University of Zaragoza by way of Javier Zaragoza-Soria

CatMDServices – OpenSource project at OSOR.eu

We proudly announce that the new application CatMDServices is officially available under an open source license. It has been developed by GeoSpatiumLab and the Advanced Information Systems Group from the University of Zaragoza with the sponsorship of IGN (National Geographic Institute, Spain). CatMDServices is a Web application for describing and searching web services by means of metadata.

The tool has been implemented with J2EE and GWT technology and has the following features:

- Multi-platform (Windows, Unix). As it has been developed with J2EE and the storage of metadata records is managed directly through the file system, the application can be deployed in any platform with the requirements of having installed Tomcat and a Java virtual machine. On the client side users only need a web browser with Javascript support.
- Multilingual. The application has been developed following the Java internationalization methodology. Nowadays, there is support for Spanish, English, French, Portuguese, Catalan, Galician and the Basque language. With little effort, other languages can be supported.
- Description of services by means of metadata in compliance with the metadata implementing rules of the INSPIRE directive. The metadata model proposed follows the guidelines for mapping the metadata implementing rules to ISO 19115/19119.

Global Spatial Data Infrastructure Latin America and the Caribbean Newsletter

- Web services searching of metadata stored in the local metadata repository according to different criteria such as the geographic extension of the data provided by the service, the keywords, the service type or the services provider.
- Automatic metadata generation from the "getCapabilities" operation supported by a service that complies with the OGC Specifications (WMS, CSW, WFS, WCS or WPS).
- Thesaurus and controlled list utilities to facilitate the edition of metadata. This enables metadata creators to use them in order to fill in some metadata elements. The use of controlled keywords facilitates the mapping between a selected vocabulary and a large collection of records.
- On-line help.

CatMDServices can be downloaded from OSOR at the following web sites:

<https://forge.osor.eu/projects/catmdservices/> ; <http://catmdservices.forge.osor.eu/>

MapServer 5.4.1 is Released

Source: <http://mapserver.org/>

MAPSERVER

MapServer 5.4.1 has been released. See the [Change log](#) for more details and head to [Download](#) to obtain a copy. MapServer is a project of the Open Source Geospatial Foundation. MapServer is an Open Source platform for publishing spatial data and interactive mapping applications to the web. Originally developed in the mid-1990's at the University of Minnesota, MapServer is released under an MIT-style license, and runs on all major platforms (Windows, Linux, Mac OS X). The MapServer Project Steering Committee (PSC), sanctioned by OSGeo, manages and administers the project which is maintained, improved, and supported by developers from around the world. MapServer is not a full-featured GIS system, nor does it aspire to be.

Geomajas.org to Unveil Version 1.4.0 of Open Source, Web-based, Editable GIS Software

Source: <http://spatialnews.geocomm.com/>

Developers from Belgium have released today Geomajas version 1.4.0. This new version is the stable release of version 1.3.0, announced in September 2008. Geomajas is the open source GIS software enabling geographical editing and support for complex relation models in the web browser. The software has an open architecture enabling easy sharing, integrating and updating of GIS data on multiple servers. Geomajas can be used to build web-mapping applications providing GIS solutions which have a need for complex analysis, editing and integration of geographic data. Geomajas 1.4.0 can be downloaded for free via www.geomajas.org Also on the website a technology demonstration can be found showing how Geomajas becomes a full desktop application inside a browser.

[Internet in Braille](#)

Source: <http://www.institutodeengenharia.org.br/>

The reading and writing for people with visual impairment occurs mainly through the system invented by the Frenchman Louis Braille (1809-1852). It is an alphabet whose characters are indicated by points in relief, distinguished by the touch. The six salient points allow 63 possible combinations to represent letters simple and bold, scores, numbers, musical notes and algebraic signs. A research project, conducted at the State University 'Paulista' (UNESP) in São José do Rio Preto, has developed a console in Braille to enable access for visually impaired people to the content of Web sites. The work aims at building an electromechanical device, reconfigurable in real time, capable of displaying all the different signs of the Braille alphabet in a matrix of points that rise and descend on a surface of reference. The project is in the process of building the hardware.

[Discovering cities with the Google Transit Layer](#)

Source: <http://google-latlong.blogspot.com/>

Earlier this year, we announced the launch of the Transit Layer, a feature that makes it easier for citizens and tourists around the globe to access public transportation line information in their cities. We're continuously expanding the coverage of Transit Layer, and have added support for transit systems in China, Japan and Russia, which are some of the most complex and remarkable metro lines in the world. The Transit Layer is not only useful to plan a visit, but also to see a city's history, structure of transportation systems, and daily life.

Training Opportunities

[First SIRGAS School on Reference Systems, Bogota, Colombia](#)

Source: Claudio Brunini and Laura Sánchez by way of PAIGH's Pan-American Network

First SIRGAS School on Reference Systems

As an initiative of the Working Group II SIRGAS (SIRGAS-WGII: Geocentric Datum), the first SIRGAS School on Reference Systems will take place next July in Bogota, Colombia. This School is sponsored by the Pan-American Institute of Geography and History (PAIGH) and the International Association of Geodesy (IAG). It is oriented to producers and users of precise geodetic data in the SIRGAS member countries. Its central objective is to strengthen the fundamental concepts associated with Geodesy of Reference. This includes:

- Geodetic reference systems and frames;
- Determination of coordinates based on Global Navigation Satellite Systems (GNSS);
- Relationship between the heights obtained from GNSS positioning and those derived from geodetic leveling;
- SIRGAS: Geocentric Reference System for the Americas;
- Availability and use of the SIRGAS products.

The SIRGAS School on Reference Systems will take place between 13 and 17 July 2009 at the Oficina Centro de Investigacion y Desarrollo de Informacion Geografica (CIAF) at the Instituto Geografico Agustin Codazzi (IGAC), Bogota, Colombia. Attendance to the School is free of charge, but is limited to one hundred (100) participants. The registration form, as well as details about agenda, content, lecturer, and travel conditions for entry to Colombia are available at the website: <http://www.icde.org.co/web/guest/sirgas>

Course on Spatial Data Infrastructures-SDI's, Colombia

Source: <http://www.icde.org.co/>

The aim of this course is to inform professional participants on the meaning of Spatial Data Infrastructure (SDI), the development context, components, initiatives and progresses at different levels, in order to understand the importance of standardization in geographic information management, and the impact of SDIs in promoting production, exchange, access and use of geographic information for social, economic and environmental territorial development. The course will be held on September 7- 18. Registration deadline is **August 14**. More information at: <http://www.icde.org.co/web/guest/ides>.

Hazard and Risk Assessment of Natural Disasters, Bolivia

Source: ITC Alumni Coordinator

Application Deadline is **July 2**, 2009. The annual short course "Threat and Risk Assessment for Natural Disasters" will be organized at CLAS, Bolivia (6 - 24 July). The theory part of this course will cover concepts on disasters, risk, vulnerability, hazard and elements at risk. The use of spatial data for hazard, vulnerability and risk assessment will be dealt with in group exercises. Specific hazards as landslides, flooding and earthquakes will be lectured in more detail later on in the course. Exercises from the "Risk-City" course are mainly used for this course. For more information: http://www.itc.nl/education/courses/course_descriptions/_pdf/C09-NRS-IME-01.pdf

For application: http://www.clas.umss.edu.bo/cursos/formulario_riesgo.asp

Workshop on Spatial Data Infrastructure (SDI) 2009, Ecuador

Source: <http://www.geoportaligm.gov>

This Spatial Data Infrastructure (SDI) 2009 Workshop has the objective of preparing practitioners responsible for the production of geographic information at various institutions in Ecuador, and for implementing a Spatial Data Infrastructure (SDI) at the institutional level. The workshop takes place between June 29 and July 7, 2009, at CEPEIGE, at the IGM Building in Quito, Ecuador.

ICT Center offers internationally accredited courses, St. Kitts and Nevis

Source: <http://www.zisonline.com/>

Locals can now gain an internationally certified competency level in various computer fields by participating in training and/or examinations at the National Information and Communication Technology (ICT) Center. During an appearance on SKNIS Perspectives, ICT Policy Advisor, Pierre Bowrin revealed that the facility gained accreditation as an authorized test center for the electronic testing company Pearson VUE a few weeks ago, completing a process which began late last year. Mr. Bowrin stated that while there are many training subject areas, he was particularly excited about the courses on computer hardware support, internet security, Linux management, web development and CISCO networking. He added that internet competency was also offered. He explained that the National ICT Center was poised to continue meeting its mandate of being an engine of growth and training in the Information Technology sector.

This course will take place on July 20- 24, 2009 at the headquarters of the Water Center for the Humid Tropics of Latin America and the Caribbean (CATHALAC), in Ciudad del Saber, Edificio 111, Clayton, Panama, Republic of Panama. Please register online until **July 10** 2009 at www.cathalac.org/educacion/registro. Contact: educacion@cathalac.org.

[UN-SPIDER International Workshop- Quito, Ecuador, September 29-October 2](#)

Source: Juan Carlos Villagran by way of Santiago Borrero

The UN-SPIDER Programme is pleased to announce that it will be conducting the International Workshop: "Space Applications in the context of Risk Management and Disaster Response" on 29 September – 02 October 2009 in Quito, Ecuador. This workshop constitutes the first event of this type conducted by UN-SPIDER in Latin America with the goal of establishing the basis for its programme of activities in this region. [Here](#) is found an Information Note for this workshop, including the application form. The Note is drafted in Spanish language, as the event will be held using this language. Looking forward to your participation in this event.

ESRI Chile hosts seminar on Geographic Information Systems (GIS) role in new Governmental Challenges

Source: Ma Eugenia Pozo

ESRI Chile lo invita al Seminario:

El Rol del SIG en los nuevos Desafíos del Gobierno

ESRI Chile

GIS and Mapping Solutions

ESRI Chile has organized a seminar titled "The Role of GIS in the new Governmental challenges ", which will be held on **July 29-30**, and Sheila Steffenson, Director of Federal Science Business ESRI USA will be the main reporter. This seminar will focus on space technologies and their implementation in a variety of workflows that improve the processes of each government. This because in Chile the central government, and regional and local authorities manage significant investments in infrastructure and labor so that these should be administered efficiently based on appropriate planning. This seminar is aimed at directors and deputy directors of government institutions (both central and regional executives), transportation industry, education, infrastructure, natural resources, mining, forestry, electricity, telecommunications, mapping and health professionals, analysts, technicians and ICT application developers and GIS, and government advisors and consultants who seek to innovate and enhance the implementation of ICT and GIS inside these organizations. The event is free and will be held at San Antonio 65, Santiago Centro, Chile. More information and registration at the following link: http://www.esri-chile.com/Sem_EsriGobierno2009/index.htm.

[Mexico seeks help for developing nations on climate change](#)

Source: <http://www.terradaily.com/>

Mexican President Felipe Calderon called for financial help for developing countries to meet their climate change commitments under a new treaty set to replace the Kyoto Protocol. The Major Economies Forum (MEF), including environment ministers from the world's largest polluters, met in central Mexico as part of a US push to speed up work towards the key new United Nations accord to curb greenhouse gases. The new agreement must include "adequate instruments so that all the world's nations, particularly developing countries, can count on sufficient (economic) stimulus and incentives to meet their commitments," Calderon said at the start of the two-day meeting. The talks come as international support is growing for a Mexican proposal to raise billions of dollars to fight climate change through a so-called "Green Fund." The plan would oblige all governments to pay in cash based on a formula reflecting the size of each nation's gross domestic product, greenhouse gas emissions and population.

New Report Sets Forth Principles of Earth Science Literacy

Source: NSF News

Earth's rocks and other materials provide a record of its history. Our solar system formed from a vast cloud of gas and dust 4.6 billion years ago. Earth's crust has two distinct types: continental and oceanic. These and other concepts are the major ideas of Earth science that all citizens should know, according to a newly released report "Earth Science Literacy Principles: The Big Ideas and Supporting Concepts of Earth Science" funded by the National Science Foundation. More at

http://www.nsf.gov/news/news_summ.jsp?cntn_id=114904&govDel=USNSF_51.
